EDUCATION

University of Southern California, Viterbi School of Engineering Los Angeles, CA
B.S. Computer Engineering and Computer Science, Minor: Applied Analytics | GPA: 3.77/4.0 *Expected May 2028*

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Discrete Mathematics, Theory of Computing, Intro to Software Development, Embedded Systems, Computing in Python
- **Honors:** Dean's List; Presidential Scholar (half-tuition award granted to top 2.5% of admitted students)

EXPERIENCE

Technology Consulting Intern May 2026 – August 2026
KPMG (IT Assurance & Technology Enablement) *Panama City, Panama*

- Developed target operating model and roadmap for a core banking transformation at a leading Latin American bank, aligning business and technology stakeholders on future-state processes.
- Automated shift-hour allocation across teams using Python and Alteryx, enforcing payroll and tax compliance rules, cutting a month-long manual process to hours
- Built a centralized data platform in Python, Alteryx, and Excel to standardize and consolidate project data across consulting teams

Computer Science & Math Teaching Assistant March 2025 – Present
USC Student Athlete Academic Services (SAAS) *Los Angeles, CA*

- Tutor 10+ Division I student-athletes weekly in mathematics, engineering, and computer science courses, providing individualized academic support and exam preparation, leading to an average increase of 1 letter grade.

PROJECTS

SmartPantry | *Java, Java Servlets, MySQL, JavaScript, WebSockets* January 2026 – Present

- Built a full-stack pantry management application with an 8-person team that recommends recipes based on ingredients users have at home.
- Engineered a multi-threaded Java Servlet/MySQL backend with WebSockets for real-time updates and designed the relational schema and recipe recommendation algorithm.

Carpool Coordination Platform | *React, JavaScript, Supabase, PostgreSQL* January 2026 – Present

- Built a full-stack platform that automatically assigns USC Ski & Snowboard Team members to outbound and return vehicles based on trip sign-ups.
- Developed an automated Google Forms-to-PostgreSQL pipeline and rule-based matching algorithm using availability, vehicle capacity, travel dates, and rider preferences.

Personalized Menu Compatibility API | *Python, FastAPI, PostgreSQL, SQLAlchemy* May 2026 – Present

- Built a FastAPI backend that evaluates menu ingredients against user allergies, dietary restrictions, and nutrition goals using deterministic compatibility scoring.
- Developed a safety-gated scoring engine with allergen warnings, confidence ratings, nutrient-goal matching, and meal modification suggestions.
- Integrated Edamam with PostgreSQL caching and secured the API using JWT authentication, Argon2 hashing, SQLAlchemy models, and Alembic migrations.

LEADERSHIP & INVOLVEMENT

Project Member January 2025 – Present
SCOPE USC *Los Angeles, CA*

- Selected into a competitive cohort of 20 students; dedicated 12+ hours per week to learning a new framework each semester (Spring 2025: Golang; Fall 2026: React Native)
- Collaborate in weekly sprints with Git-based workflows, delivering project milestones on schedule

Additional: 5× Panamanian Gymnastics National Team | USC Ski & Snowboard Team | Running | Surfing | Photography | SC Triathlon | Spoken Languages: English, Spanish

TECHNICAL SKILLS

Languages: C/C++, Java, Python, Go, JavaScript, TypeScript, SQL, HTML/CSS
Backend & Systems: Java Servlets, Spring Boot, Node.js (Express), REST APIs, WebSockets
Databases: MySQL, relational schema design, query optimization
Tools & Technologies: Docker, Git/GitHub, Unix/Linux, Pandas, NumPy, Matplotlib, Alteryx
Certifications: Machine Learning (DeepLearning.AI/Stanford) – Supervised & Unsupervised Learning, Regression
